

SYSTEM AND METHOD FOR DATA REPLICATION IN A COMPUTER SYSTEM

ABSTRACT OF THE DISCLOSURE

A system and method for replicating data in a computer system is disclosed. In
5 one embodiment, data replication between a source subsystem and a target subsystem may be
selectively changed between synchronous data transfer and asynchronous data transfer based on
the occurrence of selected conditions. In another embodiment, a repository subsystem allows
write statements to be queued during the time that the target subsystem is unable to replicate data
from the source subsystem.
